None of prior art teaches a method and an apparatus of a structure for use in audio playback which comprises a pair of audio speakers, as specifically claimed in claims 1 and 9, wherein each speaker has a housing, a retractable fastener which is movable between a retracted position and a fully extended position, and a fixed fastener which is movable between a locking position and an unlocking position while the retractable fasteners are in the retracted position and one of the fixed fasteners overlaps the other of the fixed fasteners (also see page 5, lines 20-22 through page 6, lines 1-6 and see page 7, lines 11-16 in the specification).

None of prior art teaches an apparatus of a structure for use in audio playback which comprises a pair of audio speakers each having housings and fasteners that cooperate to provide a convex configuration, wherein the fasteners of one of the speakers are arranged to be in engagement with the fasteners of the other of the speakers to lock the housings together, and the fasteners are configured to release from each other by disengaging the fasteners, and wherein the fasteners of each of the speakers include one that is retractable between a retracted position and a fully extended position and one that is fixed against retraction (also see page 5, lines 20-22 through page 6, lines 1-6 and page 7, lines 11-16 in the specification).
